## DESCRIPTION

### Structure

What distinguishes the Loop multi-activity table is the variety of shapes of the elements that compose it; the table develops in three directions, and between these are arranged the 3 benches, which have a plan shape of a square, a triangle and a circle respectively. The load-bearing structure of the table is made up of feet obtained by overlapping shaped circular section tubes and a perimeter frame in tube of the same section to support a 2 mm thick galvanized steel sheet top welded to it; each individual foot is equipped with base plates in galvanized sheet metal with holes for fixing to the ground.

- The benches are made with the same construction method, the frame obtained by overlapping circular section tubes and a seat surface in 2 mm thick galvanized steel sheet; each seat is equipped with a special counterplate to be preliminarily anchored to the ground, and to which it must be fixed.
- All the edges of the various elements are free of sharp edges.

## COLOR FINISH AS PROVIDED IN THE CATALOG

RAL 3020  
( Bench )

RAL 9010  
( Table and supports )

RAL 1018  
( Bench )

RAL 5012  
( Bench )

Customers can request a different finish from the RAL color options available on our website.

## PRODUCT OPTIONALS

Product code D832-QUA - SQUARE module multi-activity session Loop

Product code D832-T - Loop Multi-Activity Table Module only

Product code D832-CER - CIRCLE module, Loop multi-activity session

Product code D832-TRI - TRIANGLE multi-activity session module Loop

3/5

## ANTICORROSIVE TREATMENTS AND FINISHES

### Washing

Spray treatment for removing oil and grease from metal surfaces using special degreasing liquids. Subsequent drying in dryer for 15 minutes.

### Sandblasting

Manual sandblasting process with river sand, which increases the porosity of metal surfaces and thus the adhesion of thermosetting powders.

### Anti-corrosive application

First painting cycle with an anticorrosive thermosetting powder primer based on epoxy resins and special pigments. It provides adequate protection against weathering.

### Anticorrosive polymerization

Baking in an industrial curing oven at a temperature of 180°C. During this stage, the powder turns into a uniform, smooth and durable coating.

### Colored finish application

Final coating cycle with thermosetting powders. Application follows the same principles as the anticorrosive.

### Polymerization colored finish

Final baking in an industrial curing oven at a temperature of 180°C. The procedure follows the same principles as the curing of the anticorrosive. The powder is transformed into a uniform coating, and the surface appearance takes on the characteristics of the chosen color type, e.g. smooth, textured, wrinkled, etc.

4/5

---

## DELIVERY

Product supplied in assembly kit with steel hardware and instructions for mounting and grounding.

---

## FIXING

The product is prepared for fixing to the ground using anchor bolts and expansion plugs.

---

## CORPORATE CERTIFICATIONS
