DESCRIPTION

Structure

Sturdy and elegant design, the Stanley bollard is a sturdy metal barrier designed to define public areas with safety. Made with curved external casings in galvanized steel, this bollard has an upper and lower base disk connected by lateral profiles. It is anchored to the ground by cementing.

Total weight: 17Kg

COLOR FINISH AS PROVIDED IN THE CATALOG

RAL 9016
(Wrappers)

RAL 6029
(Disc and vertical supports)

Customers can request a different finish from the RAL color options available on our website.

PRODUCT VARIANTS

Product code G479 - Oliver Bollard

Datasheet
Stanley bollard
Product code G478

Rev. 0 of 05/09/2024

Washing

Spray treatment for removing oil and grease from metal surfaces using special degreasing liquids. Subsequent drying in dryer for 15 minutes.

Sandblasting

Manual sandblasting process with river sand, which increases the porosity of metal surfaces and thus the adhesion of thermosetting powders.

Anti-corrosive application

First painting cycle with an anticorrosive thermosetting powder primer based on epoxy resins and special pigments. It provides adequate protection against weathering.

Anticorrosive polymerization

Baking in an industrial curing oven at a temperature of 180°C. During this stage, the powder turns into a uniform, smooth and durable coating.

Colored finish application

Final coating cycle with thermosetting powders. Application follows the same principles as the anticorrosive.

Polymerization colored finish

Final baking in an industrial curing oven at a temperature of 180°C. The procedure follows the same principles as the curing of the anticorrosive. The powder is transformed into a uniform coating, and the surface appearance takes on the characteristics of the chosen color type, e.g. smooth, textured, wrinkled, etc.

DELIVERY

Product supplied already assembled, no need for fastening hardware.

FIXING

The product must be installed by cementing.
