DESCRIPTION

Structure

With a particular hexagonal shape, consisting of a rear panel and front door made of 2 mm thick galvanized sheet metal and equipped with a hole for inserting waste; the door (with book-like opening) is equipped with a single key lock. At the ends of the panels are two uprights, made with an exclusive 2 mm thick galvanized steel profile, welded onto a special shaped base in galvanized steel sections and equipped with an internal bottom. Fixed internal bag holder made of a "U" profile for inserting the bag (not supplied).

- In the upper part, the bin is equipped with a hexagonal-shaped lid; an ashtray for extinguishing cigarettes is incorporated into the lid; complete with a micro-perforated plate in polished AISI 304 stainless steel sheet, 1 mm thick; emptying takes place using a special lever, located in the lower part, which allows the contents to be removed directly into the bag placed underneath
- An automatic return spring ensures that the ashtray always remains closed.
- Sticker (front/back) indicating the type of collection.

Overall weight: 41Kg

TREATMENTS AND FINISHES THAT PREVENT CORROSION

Washing

Spray treatment is used to get rid of oils and fats from metal surfaces by using special degreasing liquids. The process involves drying in a dryer for 15 minutes.

Sandblasting

The porosity of metal surfaces is increased by the manual sandblasting process with river sand, which results in an increase in thermosetting powder adhesion.

Anticorrosive application

The first step in the coating process involves using a thermosetting powder anti-corrosion base made of epoxy resins and specific pigments. It provides enough protection against the elements.

Anticorrosive polymerization

The process involves cooking in an industrial curing oven at 180°C. In this step, the powder is transformed into a coating that is uniform, smooth, and lasting.

Polymerization coloured finish

The final phase of coating with thermosetting powders. The application complies with the same principles as the anti-corrosion.

Polymerization colored finish

The final product will be cured in an industrial curing oven at a temperature of 180°C. The procedure is based on the same principles as the polymerization of the anti-corrosion agent. The powder becomes a uniform coating, and the surface becomes the characteristics of the chosen color type, including smooth, peeled, or wrinkled, etc.

5/5

DELIVERY

Prodotto fornito in kit di assemblaggio con viteria in acciaio ed istruzioni per il montaggio e fissaggio.

FIXING

Il prodotto è predisposto per il fissaggio al suolo mediante tirafondi e tasselli ad espansione.
