DESCRIPTION

Structure

"You are Here" is the concept that the YouAreHere Totem proposes with its innovative design, materializing the well-known shape of the "marker" of multimedia maps, in order to highlight the exact coordinates of the place where the user is located at that precise moment. The totem is composed of a central body made of a box made of 3 mm thick galvanized sheet metal and a base made of 10 mm thick galvanized sheet metal, equipped with holes for fixing to the ground.

- N. 2 shaped upper panels, obtained from high definition plasma cutting, and made of 3 mm thick galvanized sheet metal.
- The front panel is designed for the reproduction through screen printing, of the description of the place or monument, based on the Customer's needs, see (OPTIONAL G529/AD).
- N. 2 shaped lower panels for decorative purposes obtained from high definition plasma cutting and made of 10 mm thick galvanized sheet metal. 3.
- Front "signal" consisting of a shaped support obtained from high definition plasma cutting, and made of 10 mm thick galvanized sheet metal, equipped with a base incorporated into the base of the totem.
- The particular arrangement of the elements that make up the structure allows you to identify the coordinates represented on the central body, see (OPTIONAL G529/AD), through the central hole of the "signal".

Overall weight: 99Kg

COLOR FINISH AS PROVIDED IN THE CATALOG

RAL 3020
(Bookmark)

RAL 7001
(Upper and lower panel)

RAL 7005
(Central body)

Customers can request a different finish from the RAL color options available on our website.

PRODUCT OPTIONALS

Product code G529-AD -

ANTICORROSIVE TREATMENTS AND FINISHES

Washing

Spray treatment for removing oil and grease from metal surfaces using special degreasing liquids. Subsequent drying in dryer for 15 minutes.

Sandblasting

Manual sandblasting process with river sand, which increases the porosity of metal surfaces and thus the adhesion of thermosetting powders.

Anti-corrosive application

First painting cycle with an anticorrosive thermosetting powder primer based on epoxy resins and special pigments. It provides adequate protection against weathering.

Anticorrosive polymerization

Baking in an industrial curing oven at a temperature of 180°C. During this stage, the powder turns into a uniform, smooth and durable coating.

Colored finish application

Final coating cycle with thermosetting powders. Application follows the same principles as the anticorrosive.

Polymerization colored finish

Final baking in an industrial curing oven at a temperature of 180°C. The procedure follows the same principles as the curing of the anticorrosive. The powder is transformed into a uniform coating, and the surface appearance takes on the characteristics of the chosen color type, e.g. smooth, textured, wrinkled, etc.

DELIVERY

Product supplied in assembly kit with steel hardware and instructions for mounting and grounding.

FIXING

The product is prepared for fixing to the ground using anchor bolts and expansion plugs.
